

REACH CONFORMITY

The European Union set up European a single system of **R**egistration, **E**valuation, and **A**uthorisation of **C**hemical substances.

The objective being to improve knowledge of chemical substances and their effects on our health and our environment.

By instituting this system that makes it possible to reinforce information between all the actors of the chain of provisioning.

As manufacturer and supplier of semi-finished and finished products, our activity is only a processing of the raw material; we do not put on the market substance which could be subjected to registering.

However, for our supplying of finished products or any other substance entering on our manufacturing process, we are tributary of our suppliers. Consequently, we control with them, and follow-up the lists of products used in our finished products in order to ensure that they are free of these forbidden raw materials.
